Recruitment

Ms. Vimansha Ranasinghe
Senior Lecturer
Department of Human Resource Management
Faculty of Commerce and Management Studies
University of Kelaniya

Learning Outcomes

At the end of the session students should be able to;

- distinguish recruitment and selection in the tech industry
- discuss the importance of proper recruitment and selection in the tech industry process for a tech company or startup
- examine different technical assessments, coding interviews, and AI-driven hiring tools and their validity in the marketing function

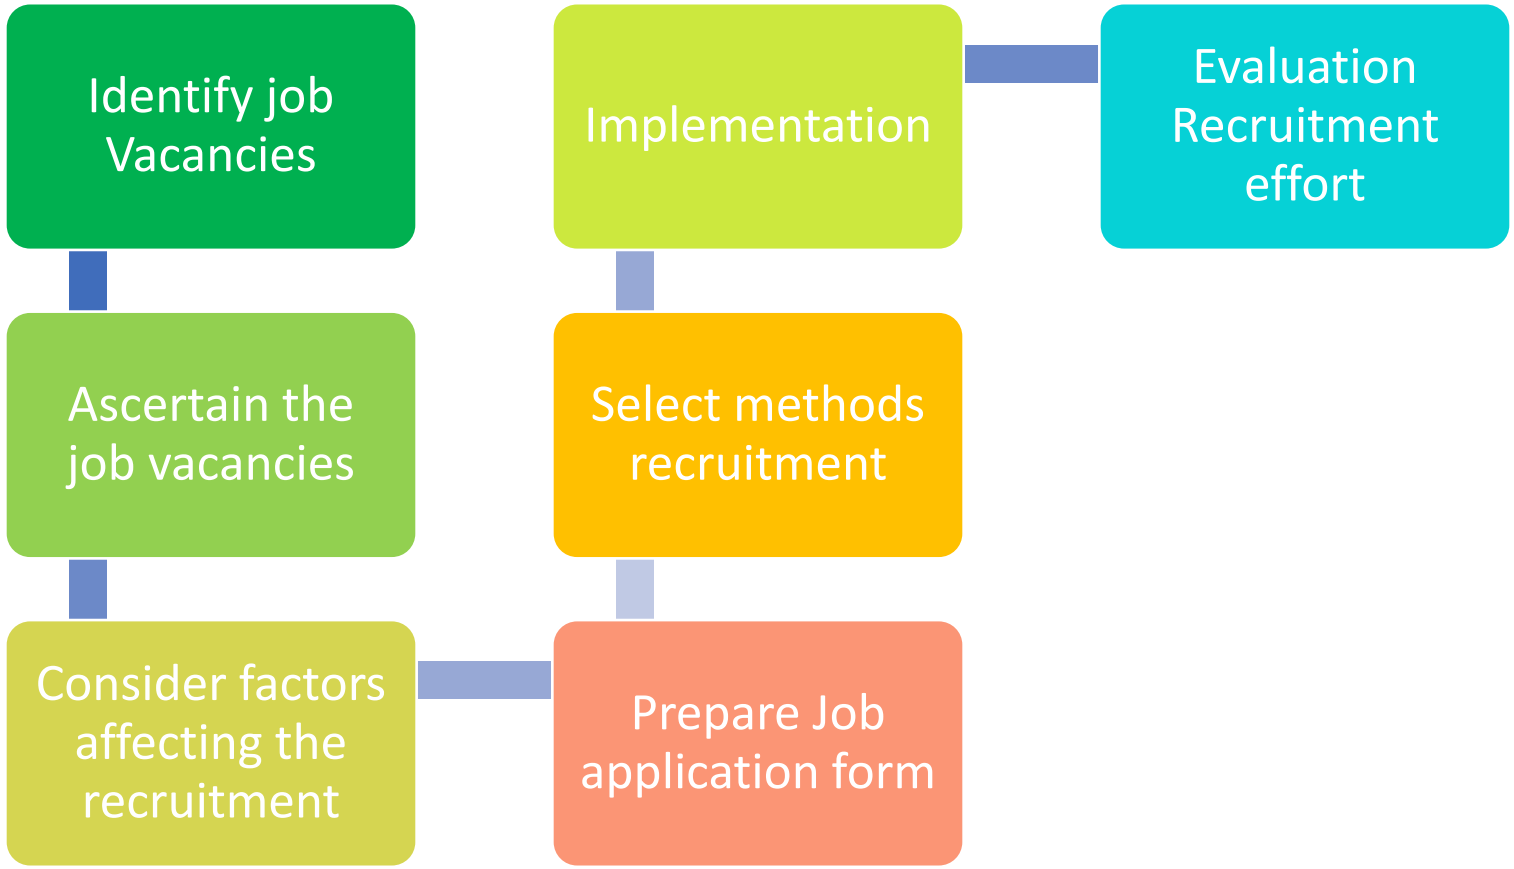
What does it mean “Recruitment” ?

- This means finding and attracting suitably qualified persons to apply for employment.
- The general purpose of the recruitment is to provide tech companies or startups with a pool of potentially qualified job candidates.

Importance of Recruitment

- To acquire the pool of qualified job seekers.
- To acquire the pool at the lowest possible cost.
- To reduce texperts'n applicant once hired, would leave the tech company or startup after short a time
- The quality of HR in a tech company or startup depends heavily on the quality of the employees attracted to. The software engineers, data scientists, and cybersecurity experts' quality depends on recruitment.

Recruitment Process



1. Identify the Job Vacancies

- It is possible to know the number of vacancies with regard to certain jobs through the HRP.
- It should show the future and current vacancies.

2. Ascertain Job Requirements

Having identified the software developer and IT vacancies HR manager or relevant manager who is in charge of recruitment should ascertain job requirements in order to attract suitably qualified persons.

If JD and JS are not available or not updated, comments of the relevant managers whose department, section, or unit has the vacancy, or vacancies can be used to know the job requirements.

3. Consider Factor Affecting the Recruitment

1. Recruitment policies

a. Internal recruitment policies
It refers to procuring candidates to fill the vacancies within the tech company or startup itself. The person who is currently working can be transferred or promoted

b. External recruitment policies
It refers to procuring candidates to the fulfill the vacancies from outside of the tech company or startup

2. Cost

- The HR Manger has to work under the specific budget. Having good financial strength then they can advertise more than two or three times.

3. Employee Market Condition

- This also affects the recruitment. If there is a shortage of the suitably qualified employees within the recruitment time.

4. Time Constraint

- It is better if tech company or startup could use the two or three methods to recruit the persons.

5. Types of needed employees

- This affects the scope of the recruitment effort. (This means the scope of the recruitment effort refers to the extent of geographical limitations). Which individuals should be recruited from village, town, District, region or country

- The reason is lesser absenteeism and tardiness and travelling cost

4. Prepare the Job Application Form

This has to be done when recruitment is done for the first time for the job of software engineers, data scientists, and cybersecurity experts in a uniform way. Separate applications get high cost.

Provides relevant, necessary and complete information regarding the job of software engineers, data scientists, and cybersecurity experts.

5. Select the Method of Recruitment

There are two methods for recruitment.

- Internal recruitment – This means recruiting the people within the tech company or startup
- Simple word of mouth, Job posting and binding, skill inventories and management inventories, Intranet, Succession plan

External – These methods to seek software engineers, data scientists, and cybersecurity experts from the outside

1. Employee referrals
2. Past Employees
3. Educational Institutes
4. Employment Agencies
5. Executive and professional institutes
6. Trade unions
7. Professional institutes
8. Career fair
9. Internet-Job posting
10. Clients
11. Advertisement

6. Implementation

Decision taken are above steps are implemented performance of the above steps results in development of recruitment plan really.

7. Evaluation Recruitment Effort

This is the final step of the model of the process of recruitment. Here, it should be done that the tech company or startup collects the data about the evaluation and evaluates the success.

The methods used which does not fulfil this purpose will become ineffective, and they should not be used in future for successful recruitment.

Selection

What is selection?

- “The process of making the choice of the most appropriate person from the pool of applicants recruited to fill relevant software developer and IT-related vacancies”.
- The most qualified person and most appropriate person can be totally different. When we select the most qualified person, he/she becomes demotivated due to the expectations over various aspects within a short time period.

Unfavorable consequences of wrong selection decision

- Expected job performances does not occur as long as the wrong employee is within the tech company or startup.
- Loss of appropriate person
- Possibility of occurrence of losses and costs
- Cost of grievances handling can be high due to elimination
- Additional cost per procuring new employee to the tech company or startup

The Methods of selection

- Application evaluation
- Employment Tests
- Interviews
- Background Investigation
- Medical Test
- Assessment centre

Application Evaluation

- Assessing the job applicant’s suitability for the job vacancy using information given in the application form sent by him/her is referred to as employment application evaluation.

Employment test

- The examinations are held to assess the degree of the suitability of the job applicant for the job vacancy.

- Advantages and disadvantages of employment test…….

Interviews

- Interview is a face-to-face, oral and observational evaluation method of appraising an applicant’s acceptability with regard to a certain job.

- Through the interviews, create an in-depth conversation between a prospective employer and applicant for the purpose of deciding whether the applicant is the most appropriate person to fill the job vacancy.

Types of interviews

There are several bases for classifying the interviews

1. Participants in the interviews

- Individual interviews:- one interviewer and interviewee
- Panel of interviews: - interview which consists of more than one interviewer.

2. The nature of the question asked

- Structured Interviews: - includes a pre-determined set of questions that are addressed to each applicant. Before starting the interviews, these questions need to be developed.

- Unstructured Interviews: -There is no pre-determined set of questions that are addressed by the software engineers, data scientists, and cybersecurity experts.

3. Mixed Interviews: - A blend of structured questions and unstructured questions. The aim is to maximize the advantages and minimize the disadvantages.

4. Problem-solving interviews: -contain a set of problems that the applicant will have to face actually or may have to face on the job if he/she is selected for the job.

5. Stress interviews:- contain the questions that are asked inertially to annoy, embarrass or frustrate the applicant with the purpose of examining the ability of the candidate to face such questions.

Background of selection

- Special investigation to reveal the real background of the job applicant.
- No employer tech company or startup seeks to get an employee who has a history of crimes or blemished character; honesty is one of the essential moral qualities.
- Types of background investigations
- Academic
- Employment
- Personal/Individual
- Finance

Medical Investigations

- The medical test is a special test focusing on the physical fitness of the job applicant and candidates.
- It tries to determine whether the job applicant is in a sound health state in order to perform the task, duties and responsibilities of the relevant job.

Assessment Centre

The assessment centres are special programs formulated to select candidates for special managerial vacancies through the use of several techniques of evaluation.

It has the following Features

- It focuses on the behaviour of the job software engineers, data scientists, and cybersecurity experts
- There are multiple types of evaluation techniques Intelligence tests, Interviews, leaderless group activities, role play
- There are multiple assessors/evaluators(General manager, Human resource manager can be evaluator)
- Feedback is given to every candidate about their strengths and weaknesses.
- More time-consuming and more expensive

Thank You
